

ARON SANG

Senior Software Engineer | Backend & Full-Stack | Remote-Ready

Nairobi, Kenya • +254 728 803 963 • kipronoaron47@gmail.com • github.com/AronKiprono • linkedin.com/in/aron-sang

PROFESSIONAL SUMMARY

Senior Software Engineer with 4+ years of experience designing, building, and scaling production web systems for mission-driven organizations. Proficient in PHP/Laravel, Python, and JavaScript across backend, API, and full-stack development. Proven track record managing Linux VPS infrastructure, leading remote-friendly engineering teams, integrating payment gateways, and delivering high-availability systems (99.9% uptime). Comfortable owning the full software development lifecycle — from architecture and code review to deployment and incident response.

TECHNICAL SKILLS

Languages: PHP, Python, JavaScript (ES6+), Dart, Java, SQL

Frameworks & Libraries: Laravel, Spring Boot, Flask, React, Bootstrap, Flutter

Databases: MySQL, Relational Database Design, Query Optimization, Database Normalization

DevOps & Infrastructure: Linux VPS Administration, Nginx, Apache, Git, GitHub, CI/CD, Docker (basic), Deployment & Monitoring

APIs & Integrations: REST APIs, Stripe, PayPal, KCB Buni API, Calendly, Webhook Integrations

Practices: Agile/Scrum, Code Review, System Design, Technical Documentation, Remote Collaboration

PROFESSIONAL EXPERIENCE

Senior Software Engineer / Technical Lead

Jan 2025 – Present

The International Scholars Program — Nairobi, Kenya

- Architect and maintain production backend systems serving 3,000+ users, ensuring 99.9% uptime through proactive monitoring, incident response, and root cause analysis.
- Lead and mentor a team of 4 engineers via code reviews, architecture discussions, and enforcement of Git workflows and coding standards — operating in an async, remote-friendly environment.
- Managed full Linux VPS migration from shared hosting — handled server setup, Nginx configuration, PHP troubleshooting, and service restoration with under 2 hours of downtime.
- Integrated Stripe and KCB Buni payment APIs, streamlining financial reconciliation and improving accountability by 25%.
- Drove a 30% reduction in production bugs by establishing structured code review processes and development standards.
- Collaborate cross-functionally with product, design, and operations stakeholders to scope features, align technical solutions with business goals, and accelerate delivery.

Software Development Consultant

Mar 2025 – Nov 2025

Pivot Plus Solutions — Remote (Tampa, USA client)

- Provided remote technical advisory for a PHP-based web application — translating business requirements into scalable backend architecture and implementation plans.
- Designed relational database schemas ensuring data integrity, normalization, and long-term scalability.
- Oversaw integration of Stripe, PayPal, KCB Buni, and Calendly APIs for payments and booking automation.
- Mentored developers on clean code practices, Git workflows, and REST API design.

Software Engineer

Apr 2023 – Dec 2024

The International Scholars Program — Nairobi, Kenya

- Built and maintained Laravel-based web applications supporting 1,000+ users across the full SDLC.

- Designed and developed a Loan Application Module and School Application Module, cutting manual processing time by 40%.
- Integrated Calendly API to automate scheduling workflows, reducing administrative overhead for staff and clients.
- Authored technical documentation improving onboarding, maintainability, and cross-team knowledge transfer.

Software Developer

Jan 2022 – Dec 2022

Speack Solutions — Kericho, Kenya

- Built a full cooperative management system covering farmer registration, payroll, loan processing, weight tracking, and reporting.
- Implemented automated SMS notifications reaching 1,500+ farmers, improving communication transparency.
- Improved farmer participation by 20%+ through enhanced reporting visibility and digital record management.
- Collaborated with a mobile developer on a Flutter offline-sync field data collection app for cooperative clerks.

EDUCATION

Bachelor of Science in Computer Science

Karatina University, Kenya | 2017 – 2022

Relevant Coursework: Software Engineering, Data Structures & Algorithms, Object-Oriented Programming, Database Systems

KEY ACHIEVEMENTS

- 99.9% system uptime maintained across production systems serving 3,000+ users.
- 40% reduction in application processing time via purpose-built automation modules.
- 30% reduction in production bugs through code review processes and development standards.
- 25% improvement in financial accountability through payment gateway integrations (Stripe, KCB Buni API).
- Completed VPS infrastructure migration with under 2 hours downtime.
- 1,500+ farmers reached via automated SMS notifications on cooperative management platform.
