

ARON SANG

Software Engineer | CompTIA Security+ Certified | Application Security & Secure Systems Engineering

Nairobi, Kenya • +254 728 803 963 • kipronoaron47@gmail.com

github.com/AronKiprono • linkedin.com/in/aron-sang • [Portfolio: aronkiprono.github.io](https://Portfolio:aronkiprono.github.io)

PROFESSIONAL SUMMARY

Software Engineer with 4+ years designing, hardening, and operating production backend systems, CompTIA Security+ certified and a graduate of the Google Cybersecurity Professional Certificate (security frameworks & risk management, network security, Linux, SQL, Python automation, SIEM, and incident response). Hands-on track record maintaining 99.9% uptime through proactive monitoring, incident response, and root-cause analysis; hardening Linux server infrastructure; and securely integrating financial APIs (Stripe, PayPal, KCB Buni) handling sensitive payment data. Experienced enforcing secure coding standards and access controls through code review, cutting production defects by 30%. Combines full-stack engineering depth with a security-first mindset to bridge development and defense — targeting Application Security, DevSecOps, Security Analyst, or SOC Analyst roles.

CYBERSECURITY CERTIFICATIONS

CompTIA Security+ ce Certification | CompTIA

[Verify CompTIA Security+ credential](#)

Google Cybersecurity Professional Certificate — Google / Coursera

[View credential](#)

Coursework: Security Frameworks & Controls (NIST CSF) • Risk & Vulnerability Management • Network Security & Hardening • Linux & SQL for Security Analysis • Python for Security Automation • SIEM Tools & Intrusion Detection Systems (IDS) • Incident Detection, Response & Escalation Playbooks • Security Ethics & Compliance

TECHNICAL SKILLS

Security & Risk: Risk Management (NIST CSF), Vulnerability Identification & Mitigation, Incident Response & Root Cause Analysis, Network Security, Linux Hardening, Access Control (IAM), Secure Code Review, SIEM Concepts, Intrusion Detection Systems (IDS), Payment/PCI-Adjacent Data Handling

Languages: Python, SQL, PHP, JavaScript (ES6+), Java, Dart

Systems & DevOps: Linux Server Administration, Nginx, Apache, Git/GitHub, CI/CD, Docker (basic), Deployment & Monitoring

Databases: MySQL, Relational Database Design, Query Optimization, Database Normalization, SQL Log Analysis

Frameworks & APIs: Laravel, Spring Boot, Flask, React, Flutter, REST APIs, Stripe, PayPal, KCB Buni API, Webhook Integrations

Practices: Agile/Scrum, Secure SDLC, Code Review, System Design, Technical Documentation, Cross-Functional Collaboration

PROFESSIONAL EXPERIENCE

Senior Software Engineer / Technical Lead

Jan 2025 – Present

The International Scholars Program — Nairobi, Kenya

- Own security posture and reliability for production backend systems serving 3,000+ users — driving proactive monitoring, incident response, and root-cause analysis to sustain 99.9% uptime and contain risk exposure.
- Lead and mentor a team of 4 engineers, enforcing secure coding standards, Git branch controls, and mandatory peer code review across an async, remote-friendly environment.
- Hardened infrastructure during a full Linux VPS migration from shared hosting — configured Nginx, tightened server access controls, and reduced attack surface, restoring service with under 2 hours of downtime.
- Secured integration of Stripe and KCB Buni payment APIs, applying safe handling practices for sensitive financial data and improving reconciliation accountability by 25%.
- Reduced production vulnerabilities and bugs by 30% by introducing structured, security-conscious code review and development standards.
- Partner cross-functionally with product, design, and operations stakeholders to align technical and risk considerations with business goals and accelerate secure delivery.

Software Development Consultant

Mar 2025 – Nov 2025

Pivot Plus Solutions — Remote (Tampa, USA client)

- Advised on secure backend architecture for a PHP-based web application, translating business requirements into scalable, risk-aware implementation plans.
- Designed relational database schemas with data integrity and normalization controls to reduce exposure to data-handling errors.
- Oversaw integration of Stripe, PayPal, KCB Buni, and Calendly APIs, applying secure authentication and data-handling practices for payments and booking automation.
- Mentored developers on secure coding practices, Git workflows, and REST API design.

Software Engineer

Apr 2023 – Dec 2024

The International Scholars Program — Nairobi, Kenya

- Built and maintained Laravel-based web applications supporting 1,000+ users across the full SDLC, with attention to input validation and access control.
- Designed and developed a Loan Application Module and School Application Module handling sensitive applicant data, cutting manual processing time by 40%.
- Integrated the Calendly API to automate scheduling workflows, reducing administrative overhead for staff and clients.
- Authored technical and security documentation improving onboarding, maintainability, and cross-team knowledge transfer.

Software Developer

Jan 2022 – Dec 2022

Speack Solutions — Kericho, Kenya

- Built a full cooperative management system covering farmer registration, payroll, loan processing, weight tracking, and reporting on sensitive personal and financial data.
- Implemented automated SMS notifications reaching 1,500+ farmers, improving communication transparency.
- Improved farmer participation by 20%+ through enhanced reporting visibility and digital record management.
- Collaborated with a mobile developer on a Flutter offline-sync field data collection app for cooperative clerks.

EDUCATION

Bachelor of Science in Computer Science

Karatina University, Kenya | 2017 – 2022

Relevant Coursework: Software Engineering, Data Structures & Algorithms, Object-Oriented Programming, Database Systems

KEY ACHIEVEMENTS

- 99.9% uptime maintained across production systems serving 3,000+ users through proactive monitoring and incident response.
- 30% reduction in production vulnerabilities/bugs via structured, security-conscious code review processes.
- 25% improvement in financial accountability through secure payment gateway integrations (Stripe, KCB Buni API).
- 40% reduction in application processing time via purpose-built automation modules handling sensitive applicant data.
- Completed Linux VPS infrastructure migration and hardening with under 2 hours of downtime.
- 1,500+ farmers reached via automated SMS notifications on a cooperative platform managing sensitive personal/financial records.
